

## OVERVIEW

Since 2012, Knowify has provided job costing and project management tools for contracting businesses to help streamline and simplify the construction industry.

## ROI

The team at Knowify realized the following benefits from working with Autofy and the Autofy API:

### Benefits

- Saved time and money by leveraging Autofy's API
- Partner with a team of QuickBooks experts
- Smooth integration between desktop and the cloud
- Increased productivity

## CHALLENGE

Knowify didn't have the tools to provide the appropriate user experience to construction companies using QuickBooks Desktop. Since Knowify is an online platform, born in the cloud and designed to work and integrate with other online solutions, they wanted QuickBooks Desktop to feel as online as possible.

## SOLUTION

Knowify partnered with Autofy because they knew the Autofy API would be able to provide them with the right infrastructure to achieve their goals. The API allowed them to build an integration that provides a full cloud experience for QuickBooks Desktop users. Working online with desktop software poses multiple challenges, and they were able to overcome most of these challenges with Autofy.

*"Our experience with Autofy has been great. They are a great team to work with. Now that they are part of Right Networks, we will be able to take our integration to the next level."*

—Marc Visent, Co-Founder & CEO  
Knowify
